

KÄRCHER

makes a difference

MULTIFUNCTIONAL, ENVIRONMENTALLY FRIENDLY, COMFORTABLE

The flexible all-rounder for your community

A large tree trunk with rough bark, green leaves, and a white municipal machine in the background. The machine is partially visible on the right side of the image. The background shows a green landscape with hills.

PERFORMANCE, FLEXIBILITY, ENVIRONMENTAL PROTECTION.

The right machine at the right time in the right place. With Kärcher municipal machines you are optimally positioned to complete various daily tasks comfortably and efficiently.

ROBUST, COMPACT, EFFICIENT.

Comfortable large cab
with 360° panoramic view

Compact dimensions

State-of-the-art diesel technology*

Efficient quick-change concept

Up to 5 attachment options

* MIC 35 and MIC 42 comply with the requirements of the
exhaust emissions values of STAGE V acc. to 97/68 EC

Clever service concept

Innovative articulated steering

High payload and lifting force

Robust frame concept based on construction machines

True Track for 100% directional stability

Hydrostatic all-wheel drive with traction control

Our municipal machines impress heads of operations, drivers and workshop employees equally with up to 84 HP, innovative equipment details, a high level of comfort, the clever service

concept and their suitability for use in urban environmental zones. At any time of the year, in all weathers, for almost every municipal task.

EVERYTHING THAT YOU NEED.

Municipal machines from Kärcher combine the benefits of multifunctional implement carriers and vacuum sweepers in one vehicle, and blend low dimensions with robust quality and a powerful drive with maximum environmental protection. The intuitive and logical operating concept as well as clearly structured and large cabs ensure plenty of comfort all year round, while the versatile quick-change system and quick access to all service components enable flexible and efficient working.

Robust. For tough day-to-day work Derived from the world of construction machines, the support frame of our municipal machines consists of a thick-walled special structure, which confidently carries all vehicle components and implements. High axle loads also permit front mounting of heavy implements, which is crucial for winter service and garden maintenance.

The comfort cab Spacious cabs are not only much more comfortable for the operator, but thanks to the 360° all-round visibility they also improve the view of what's important, thus increasing safety. Our cabs are of course ROPS-certified and offer the best working conditions in hot and cold weather with their efficient ventilation systems as well as the optional air-conditioning system.

More compact than you think A certain level of compactness of the vehicle is essential for applications in inner city areas. This is why our municipal machines are as narrow, short and low as is technically possible. They have a low centre of gravity, and also the entry is deliberately kept very low.

Best traction all year round Thanks to the permanent hydraulic all-wheel drive with traction control, optimal traction is guaranteed at any time. For extreme applications we also offer a differential lock as an option for some of our machines.

Superb manoeuvrability Our innovative articulated steering makes possible the almost impossible, thus permitting maximum flexibility. As a result, the rear vehicle always runs exactly in the track of the front vehicle. Thanks to this extreme manoeuvrability and the 100% directional stability, it is easy to drive around every obstacle and every kerb. Guaranteed without hitting anything.

POWERFUL, CLEAN AND VERY FLEXIBLE.

Set-up times, engine performance, emissions legislation: the requirements on very different levels and from completely different directions are diverse. Our solutions are too.

Whether it is local, regional or global: legislators worldwide are tightening the emissions regulations, thus increasing the requirements of drive systems today. We are well-positioned with our two 35 or 42 HP Yanmar common rail diesel engines with particulate filter. Their exhaust emissions values comply with the requirements of STAGE V according to 97/68 EU - despite an impressive motor rating. Nothing stands in the way of applications in environmental zones and also the budget is reduced considerably with the low fuel consumption. If required, an engine variant without diesel particulate filter with STAGE 3A certification is also available for the MIC 35.

CHANGE IN A MATTER OF MINUTES

1

2

5

6

Our integrated quick-change system for front and rear implements allows one person to effortlessly change implements and reduces the set-up times, thus making applications much more flexible.

Standard A-frame interface for the mounting of various front implements allows for maximum flexibility, as both implements from Kärcher as well as existing machines in the building yard and from diverse manufacturers can be mounted.

Optional multicoupling system practically reduces the effort for the operator to zero with lever action. Also the time-consuming and awkward job of connecting and removing individual hydraulic couplings is dispensed with entirely.

Pressureless function for front and rear implements also relieves workshop employees or drivers when changing implements. Rear implements are changed easily and without great effort using supporting legs and the hydraulic tilting frame of the machine.

COMFORT FROM FRONT TO BACK

Workstation made attractive We are very proud of the cabs in our municipal machines. The low entry on both sides is already a good start to the working day, there is a feel-good atmosphere in the inside with lots of space, clearly laid-out operating elements and practical equipment details such as opening side windows on both sides, bottle holder, USB charging connections, lockable storage compartment or optional air-suspended seat with integrated document compartment.

The 360° panoramic view boosts safety and the innovative all-round ventilation system ensures an optimal interior climate in summer and winter. An intuitive multifunction display serves for the monitoring and adjustment of machine data and functions. Another 5" display can be installed as an option in conjunction with a suction mouth reversing camera. The MIC 35 and MIC 42 are also certified with the AGR quality seal (Aktion gesunder Rücken e.V.) for ergonomics.

Service and maintenance made easy High-quality components guarantee long maintenance intervals of around 500 hours. This increases the productivity and reduces the effort in the workshop considerably. If servicing, maintenance or cleaning work are required, we also make it as convenient as possible for you here. All relevant components are quickly accessible without great effort

for cleaning or maintenance tasks. This is also made possible by the foldable side panel, whose single parts can be easily removed without the need for tools. Cleaning the fuel or air-conditioning cooler is also effortless thanks to a clever folding function.

01

WINTER SERVICE

Maximum flexibility When the weather is sometimes not as forecast, this is not a problem for the MIC 35 and MIC 42. Because a complete retrofit from sweeper to winter service – and vice versa – is completed in a matter of minutes. This saves time and money and is also extremely efficient with the use of the same principle and the same stands as for our municipal machines MC 130, MIC 50 and MIC 70.

High compatibility Extreme applications and the mounting of heavy implements are easily possible thanks to the high lifting capacity of the front lifter as well as the enormous payloads and axle loads – e.g. for the mounting of a 450-litre semi-mounted spreader. The standard coupling triangle is compatible both with implements from Kärcher and from other manufacturers. This saves purchase costs and allows the use of implements from our range of implement carriers MC 50, MIC 26 and MIC 34 with an optional adapter kit.

High-performance hydraulic system Depending on the respective application, our system offers you 3 hydraulic options (front max. 60 l/min, rear max. 40 l/min). By means of proportional control of the hydraulics, front and rear implements can be controlled directly from the cab, e.g. for optimal spread width control. In addition, there is the option of comfortable spread function independent of the route.

02

SWEEPING

Intuitive operation. In every detail Our MIC 35 and MIC 42 municipal machines have a drawn, parallelogram-guided two-brush system with individual brush control. Many sweeping parameters are individually adjustable, whereby the brushes themselves can be controlled independently of each other via 2 joysticks – for example, also to move or lift them separately at the side. Collision damage is practically impossible with the protected suction mouth in the wheel contour of the front wheels with automatic coarse dirt flap. The Eco button allows you to immediately restore the last used settings upon restart at the touch of a button, thus saving you time.

Vacuuming. Reinterpreted Our suction turbine is made from an innovative composite material, is optimised for aerodynamic efficiency and works very quietly, saving fuel and protecting the drive. The waste is collected in an 800-litre waste container and conveniently emptied in typical standard containers by means of high dump. The process itself can even be controlled directly from the cab. In conjunction with our optional water reclamation system, the container size guarantees long work applications.

Quick change without tools Speed is often of the essence in day-to-day work. That's why the suction tube can be quickly removed for cleaning without the need for any tools and practically without any effort. Also the suction mouth is easily and ergonomically installed and removed via the suction mouth rod. A special brush wagon is also available from Kärcher for the time-saving removal and safe storage of the brush system.

Even more flexibility With the coupling triangle it is also possible to install the 3rd side brush or a weed brush directly on the mounting of the two-brush system. This allows the removal and pick-up of weeds in just one step – unique in this vehicle class.

03

GARDEN MAINTENANCE

Manoeuvrable, comfortable, lawn-friendly Our MIC 35 and MIC 42 municipal machines feel as much at home during garden maintenance in inner city areas as well as on delicate golf courses. The very low deadweight of only 1,400 kilogrammes and the low ground contact pressure easily allow the maintenance of delicate lawn areas, whereas the narrow turning circle enables a high degree of manoeuvrability in places with limited space. Also driving under trees is generally possible thanks to the low height of just under 2 metres. Thanks to our sophisticated articulated steering, the rear vehicle always drives 100% in the track of the front vehicle, which also helps protect the grass cover. On top of everything, the ride is also comfortable thanks to the long wheelbase.

For tough applications and high payloads Also the mounting of large front implements such as a 1.40-metre-wide flail mower or a 1.80-metre-wide sickle mower does not pose a problem for our municipal machines because axle loads, payload and digging force are designed for tough applications and high weight. In addition, implements from our range of implement carriers MIC 26 and MIC 34 can also be used by means of a separate adapter kit. For mowing, the waste container does not need to be replaced, as it is also suitable for picking up grass cuttings, which is done very efficiently by means of suction.

04

WEED REMOVAL

Number of applications →

Hot water weed removal and more Mounted on the MIC 35 or MIC 42, our WRS 200 does not require an external power or water supply and can thus also be used in remote locations for mobile, environmentally friendly and effective weed removal with hot water. Even without herbicides, neither the visible plant nor its roots can stand up to the 98 °C hot water, whilst the environment and surfaces are protected. Besides the effective removal of weeds, the WRS 200 is also suitable for a variety of other applications, such as mobile high-pressure cleaning, irrigation or the removal of chewing gum.

Compact design Our WRS 200 is so compact that even when cornering the vehicle rear remains in the outer contour of the side mirror and also the overall width of the vehicle is not influenced. This not only reduces the risk of getting stuck against house walls or vehicles, but also provides for enormous manoeuvrability. Nothing stands in the way of applications in narrow, confined areas, such as on footpaths.

Low vehicle centre of gravity The WRS 200 is designed so that it is located at the rear of the vehicle and the up to 500-litre water tank sits optimally on the rear trolley and ensures a low vehicle centre of gravity. This enhances the comfort in road traffic and at the same time reduces the risk. The WRS is connected to our implement carriers MIC 35, MIC 42, MIC 50, MIC 70 and MC 130 by means of a standard coupling triangle municipal mounting.

Logical operating concept As simple as possible and so logical that operating errors and risks for the operator can be ruled out in principle. This is evident for example in the clear separation of operation and maintenance of the machine. On the left of the machine are the parts associated with maintenance and service and on the right are the operating elements. Temperature setting, pressure control or the switch for the burner are always accessible from the roadside or the path. The operator does not have to stand on the road to operate the machine. Thanks to our clever Easy Operation system a separate display becomes superfluous.

AS DIVERSE AS YOUR REQUIREMENTS

With our municipal machines we offer you sophisticated, reliable, comfortable, effective and economical machines with which we cover the entire range of municipal tasks and activities. We have the machine and the appropriate implement.

YOU MANAGE YOUR SUCCESS. WE GIVE YOU THE SUPPORT.

Almost everything can be so much easier when talents are combined. Because it is more successful to pursue objectives together, complement each other and learn from each other. You could call it the principle of progress. We call it Kärcher Services. A promise of partnership. By professionals for professionals.

Kärcher Services:
The complete service package from the global leader. And the perfect continuation of the progressive Kärcher system with innovative tools, customised service offers and high-performance software solutions.

Kärcher Lease - Leasing
Customised. Flexible. Safe. We give you the flexibility you need: with leasing and financing models for every requirement.

Kärcher Used - Used machines
When used or second-hand is what you need. Starting up? Or simply want to save costs? We have the right used machine for you. Used, generally reconditioned, good and affordable. Offers are constantly changing. Ask us.

Kärcher Service – Customer Service

Service means trust. At all times. Services you actually need. Fast response for maximum availability. Maximum value retention and compliance with all statutory requirements.

Kärcher Maintain – Service packages

Every service package is tailored precisely to a defined requirement. The range of services includes inspections as part of prescribed safety tests, timely maintenance and flat-rate full service.

Kärcher Rent – Renting

Just the machine you need. Rent instead of buying. And get more: expertise and Kärcher Full Service in one package.
